## Our Popular 5-Foot Canna Bed

As Shown by Photograph on Cover Page Two.

Our Cannas are All Started and Grown in Pots, Ready for Immediate Effect.

This bed from photograph is made up of 18 Cannas, Pennsylvania, which we consider one of the very best bedding Cannas; it grows to be about four feet, color a rich, bright red. For a border we have Yellow Coleus. Price of bed complete \$2.25 by express, purchaser's expense. If by mail add 25 cents extra. Should you not want the border of Coleus, will sell the 18 Cannas for \$1.25. Should you desire any other Cannas, please select from our list on pages 26, 27 and 28.

Many people prefer Canna beds entirely of one kind or color; therefore we offer the following suggestions for planting in such manner: Cannas should be planted in good rich garden soil mixed with half of old, rotten stable manure. Water sparingly for the first two weeks after planting; when growing freely, water liberally. Set the plants twelve inches apart each way, and if more than one kind is used be careful to plant the taller growing kinds in the center and the dwarf ones on the edge. This applies to planting in beds.

Customers can select any variety that we list. It is well to select kinds that will grow the required height you would like to have the plants attain. Note height of each kind is plainly stated in description.

### VERY IMPORTANT Before Ordering Read the Following:

**FIRST OF ALL**—Tell us how you want your order shipped. If by mail, we pay postage. If by express, we send it collect, unless you say that we shall pay charges; in that event, we will remove nearly all the soil, thereby making it the same as a mail shipment and make your selection of premiums the same as when plants are sent by mail. This is just what is done by all firms who pay the express charges.

**THE PROPER WAY TO HAVE PLANTS** sent you is for you to pay the express, then we send larger plants, leave on enough soil in order not to disturb the plant and add enough extra plants to more than pay the express charges.

**THE AMOUNT OF CHARGES** is given on each shipping tag and if the Agent tries to collect more, pay it and

send the tag to us and we will refund the difference. If the amount should not be on the tag, ask your agent for the amount they were billed out of this city. Express charges, as a rule, on a \$3.00 order are not more than 35 cents and to far away points about 50 cents, so you can figure for yourself the extra you can get for a small outlay.

**N. B.**—We do not pay express on fruit or tree orders, nor allow premiums on them, nor put them in your premium list. They are net and not subject to discount, so kindly keep your plant and tree orders separate. Our nurseries and greenhouses are now combined and we can send your order in one shipment instead of two as heretofore, and save you one express charge. So send us your fruit orders and you will be pleased. We can send fruit by express or freight,

## NEW EVER-BLOOMING

# Begonia Gracilis Luminosa

Best Pot and Bedding Plant on the Market

As shown on fourth page of cover

**H**AS proven itself to be a very fine bedding plant as well as a pot plant. One of the members of this firm planted a row along the north side of his house and it was a mass of bloom all summer and can now be recommended to fill a place that we are often asked, "What will grow on the north side of my house?" Plant this Begonia there, in single rows or in a bed in any shady or sunny place, and if it does not do all we say it will we will refund the money. In addition, to the above we have the Pink, also the White Luminosa Begonias, same varieties as above except in color. Price, 15 cents each; two for 25 cents; twelve of either variety for \$1.00; twenty-five of any variety for \$1.50.

## Full Description of Begonia Gracilis Luminosa

This beautiful new Begonia is the latest novelty in the Begonia family. As the name implies, it is one of the most symmetrical and yet graceful plants we have ever grown; very strong and robust, but still keeping its shape so as to make a most attractive plant. It has proven the most free flowering of all Begonias, always in bloom—spring,

winter and summer. The flowers, when first opening, are a bright cherry, changing to a clear coral-red. Its foliage resembles a little that grand old variety Vernon; rich glossy green, often shaded deep bronze. This novelty is one of the best of bedders, thrives everywhere, and is destined to become the leader of all Begonias.

## OUR SUPERB PANSY PLANTS

### OUR SUPERB PANSY STRAIN

Is the very best the world produces. The colors are truly wonderful, including over a hundred different shades and combinations, with blendings and markings entirely new and of most exquisite beauty. Its culture is not at all difficult and may successfully be attempted by anyone inexperienced in horticultural affairs. Pansy plants planted in the spring as soon as the frost is out of the ground will begin to bloom at once, and afford daily pleasure for a month before Coleus or Geraniums could be even planted. If snow should fall after planting they would not be hurt. In fact, to get the best results from Pansies, they should be planted just as early as they can be. To get best results and extra large flowers, the soil must be extremely rich—we use equal parts well-rotted manure and soil. Price, for nice, strong plants, 5 cents each; six for 20 cents; twelve for 35 cents; forty for \$1.00; \$2.25 per hundred.

### ETOILE DE FRANCE

Star of France—This is undoubtedly the most magnificent new Rose introduced for many years. It is a strong, healthy grower, quite hardy, and a quick and abundant bloomer; makes beautiful large pointed buds and extra large fully double flowers three and one-half to four and one-half inches across; color very bright, dark rich crimson; exceedingly handsome, and sure to take first place among the finest Roses in cultivation. Its hardiness, vigorous growth and freedom of bloom make it particularly valuable for planting in the open ground, while the large size, exquisite color and the delicious fragrance of its buds and flowers make it especially desirable as a cut flower and forcing Rose. Strong plants, 15 cents each; two-year-old plants, 35 cents each.

### HELEN GOOD

This is a true Cochet Rose. The color is a delicate yellow, suffused with pink, each petal edged deeper, very chaste and beautiful. The color, with its immense size and exquisite form, makes it without question the greatest Tea Rose ever introduced, and we are proud to have brought it out. Be sure and try it. Price, 15 cents each; two-year-old plants, 35 cents each.

### FRAU KARL DRUSCHKI

A pure paper-white, free-flowering, large-sized Hybrid Perpetual. It is a remarkably handsome plant with bright, heavy foliage and strong, upright growth. The bloom is perfect in form, on fine long stems and of the purest possible white. There is nothing in the line of perfectly hairy Roses that can compare with this one in form, color and general finish. Price, strong one-year-old plants, 15 cents each, three for 35 cents. Two-year-old plants, 35 cents each; special offer, three for 90 cents.

### RICHMOND

(Hybrid Tea.) Produces freely throughout the year, long pointed red buds on tall, straight stems, with elegant dark foliage; very fragrant. Price, 15 cents each; two-year-old plants, 30 cents each.

### RHEA REID

This is considered by experts to be the finest red Rose in existence, surpassing even the well-known favorite American Beauty, which until the advent of this, the latest debutante in the Rose world, had no rival. Rhea Reid is an offspring of American Beauty, which fact alone would place it right in the front rank along with its hitherto unrivaled parent. Its superiority over American Beauty is due to the following great essentials: It is fully as large, is as double as Bridesmaid, as fragrant as La France, as continuous in bloom as The Bride and a much darker and richer red than the American Beauty. Strong, one-year-old plants, 15 cents, three for 40 cents; two-year-old plants, 40 cents, three for \$1.10.

### MADDALENA SCALARANDIS

This is the famous Gold Medal Rose which attracted so much attention in our Grand Prize Rose Exhibit at the St. Louis World's Fair, and we again ask special attention to it. Both buds and flowers are extra large and exceedingly beautiful and its productiveness is truly astonishing, the whole bed being a perfect blaze of bloom for weeks and months; color dark rich rose on deep yellow ground, elegantly flamed with scarlet and crimson. Strong plants, 15 cents each; two-year-old plants, 35 cents each.

### LUCIEN DE LEMOS

A large, globular Hybrid Tea with very large outer petals on long, upright stalks; warm pink, center rosy-white; flowers durable and fragrant; free in bloom; a nice grower. We are fully convinced that this fine novelty deserves a place with the two Cochets, which is the highest praise we can give it. Price, 15 cents each; two-year-old plants, 35 cents each.

One of our finest and best Roses. Its growth is very strong with a rich leathery foliage. The flowers are of a clear, deep pink with a tint of lavender. Price 15 cents each; strong two-year-old plants, 30 cents each.

### THE RED LA FRANCE

Duchess of Albany—We have no hesitation in saying to our customers that this Rose stands at the head of all Roses, not excepting La France. It is identical with La France, excepting in three points. Those are a more vigorous growth, a large and more expanded flower, and a deep, even pink in color—not shaded, but what is called a solid color.

## ROSES ALL ON THEIR OWN ROOTS

Our Roses are all grown from cuttings, and are consequently all on their own roots. If they incline to sprout from the root, they should be encouraged to do so, as young, vigorous shoots produce the finest flowers. They cannot throw up wild shoots, because root and top are the same. As long as any part of the plant or root remains it will produce the same beautiful flower. We do not send out any budded or grafted Roses. Grafted Roses should never be planted by anyone not a professional Rose grower—one who knows the wild Rose and keeps it cut away. The results of planting budded stock in 999 cases out of every thousand is a failure for the reason that the wild Rose that is used for budding stock will grow and choke out the Rose you want to grow. Then the so-called home-grown Roses of mature size are mostly Roses that have been forced in a greenhouse for several seasons for cut flowers and when they are absolutely worthless for any purpose they are sold to confiding amateur Rose growers. Our advice is whatever Rose you plant, don't for your own sake, plant the Rose that has been forced until it is worthless, no matter what name it is sold under. Keep away from them.

## PROTECT YOUR ROSES

Although we try to carefully explain in the introduction to each family or class whether the Roses in that class are hardy or not, the safest way is to protect all of your Roses, for it will do no harm to the hardest, and where manure is used as a covering it also serves the purpose as a fertilizer.

After the leaves have fallen give the beds a covering of manure, straw, cedar boughs, corn fodder, leaves or street sweepings—enough to keep the roots from freezing, but still not to smother the plants. In very cold localities it sometimes pays to wrap the entire bushes in straw or bend them down to the ground and fasten them to stakes driven for the purpose or cover with boards, as the principal object is to keep the plants dry and from the freezing and thawing at times of storms and sleet and rain. But the matter of protection is not such a serious problem these days, when good new Rose plants can be obtained at a very low price. Many people feel that the blossoms produced the first season are worth many times the cost of the plants, and so buy new ones each year.

## ALLIANCE FRANCO-RUSSE

# Hardy Roses—Hybrid Perpetuals

A Splendid List, Complete in Every Particular. None Better; None so Cheap.

Hybrid Perpetuals are considered the most valuable of all hardy plants. They are distinguished by their vigorous, upright growth and large, bold flowers, frequently measuring five to six inches in diameter. When you plant Hybrid Perpetuals you may be quite certain of having Roses every year without further trouble. Though called perpetual, it must be understood that they are not such early and constant bloomers as the ever-blooming Roses. The Hybrid Perpetual should not be ordered for house culture, as they are not suitable for that purpose. Do not become impatient if your plantings of these do not bloom the first season—give them a chance to become established. These Roses are especially suited to plant in all the Northern States and Territories, also in the colder parts of the states of Virginia, West Virginia, Kentucky, Tennessee, North Carolina, Arkansas, Missouri, etc.

Col. Appleton.

### COL. D. APPLETON

(The New Yellow)—After thorough tests this new Chrysanthemum has proved to be one of the finest yellows ever sent out. It is an ideal exhibition variety, with flowers of immense size, measuring twenty-two inches in circumference and of great depth. Flower is a magnificent Japanese incurved, with lower petals reflexed, and not showing any center. Besides its immense size and beautiful shade of clear yellow, another point in its favor is its almost faultless stem and foliage, growing fully up to the flower.

### CLEMENTINE TOUSET

Color a glistening white, sometimes tinted pearl. Petals incurved and very broad. Exceptionally easy grown, making it a fine variety for the amateur.

### MRS. GEO. F. BAER

(Yellow Jerome Jones)—Flowers very large, with incurved petals, making them nearly globular in form. A pure golden-yellow, tinted with bronze on under side of petal.

### MRS. COOMBES

An extra fine very early pink variety of the largest size, blooming just after Glory of the Pacific and before Pink Ivory. Color beautiful rose-pink, resembling Vivand Morel in color and also in style, but the petals are broader. It is a fine dwarf grower. First-class pink Chrysanthemums are scarce, and this variety will prove exceedingly valuable on account of its earliness and large size.

### WHITE COOMBES

Those growers who value so highly the grand early pink, Mrs. Coombes, will be delighted with its white sport offered herewith; extremely valuable as an October white where big, fine blooms are needed.

### DR. ENGUEHARD

Japanese incurved. One of the best introductions of recent years; has been awarded highest honors wherever exhibited. Color a true pink, without the least trace of purple. Stem and foliage perfect. Equally valuable for exhibition or commercial purposes. Perfectly double. Every flower is perfect; midseason variety.

### MAJOR BONAFFON

Soft, clear yellow, full to the center, eight inches in diameter and nearly as deep. In perfect form and finish; habit dwarf, keeping qualities excellent. It is entirely distinct in color and form from Eugene Dailedouze. It was awarded a World's Fair medal with the highest recommendations from the judges; has won ten first prizes.

### MRS. HENRY ROBINSON

In the entire Chrysanthemum family there is no grander white variety; no matter when it blooms, it is of the most popular style—immense, incurving, broad-channeled petals of great substance and the purest white; from a flat incurved form it gradually changes into a perfect ball of snow, sixteen to eighteen inches in circumference. Winner of twenty-six first prizes.

### MRS. WHITE POPHAM

Blush, with broad-channeled, incurving petals. The most popular form to be found in 'Mums. Very beautiful.

### CAPTAIN GRIDLEY

A high built Japanese incurving of large size; white, shaded blush.

It excels all in purity, extra large in size, of beautiful half-globular form, with broad incurved, shapely petals of great substance; growth robust, with large, smooth, heavy deep green foliage; carries flowers erect on stiff stems; a grand show flower, and promises to be a very profitable sort for commercial purposes.

**WM. DUCKHAM**

The sensational variety of late years. Color a deep clear pink, much darker shade than any other listed. Incurved with a broad petal. The flower is very large, measuring nine inches in diameter and supported by a long, stiff stem with good foliage. An exceedingly strong grower and comes in flower about November 5. Has received certificates at all the latest shows, including the St. Louis World's Fair.

## CULTURAL DIRECTIONS FOR CHRYSANTHEMUMS

Which, if Followed, Will Insure Success.

**When to Plant**—The Chrysanthemum is easy to please on this point. Any time after the ground can be worked, even up to June 20th, will give you good blooming plants in the fall.

**Soil**—Dig the ground deep; put in quantities of manure. The Chrysanthemum is a gross feeder; if fed well, the flowers will be large and the plant strong.

**Disbudding and Stopping**—When your plant is eight inches high, cut back to a height of six inches. Allow four shoots to grow from this main trunk. When these four shoots are four inches high, pinch out the terminal bud, and save three or four branches that will spring from each of these limbs. Allow these last branches to attain a height of nine inches, then pinch back for the last time. Allow one bud (flower) to each stem, and that a terminal bud.

**When to Lift**—In localities subject to heavy frosts in October and November, plants should be lifted into large pots or boxes by September 1st. After lifting, drench thoroughly and never allow them to suffer for water. Give manure water, if possible, once a week. If protected from frost by sheeting they need not be brought into the house till well into October, and when brought in, place in a room without fire, give plenty of air when not frosty. In cold climate winter in cellar.

**Black Aphides**—Nothing destroys this troublesome insect so easily as clean cold water dashed on forcibly with a syringe.

Each year the taste for Chrysanthemums becomes more exacting, and to meet it we offer only the finest exhibition and cut-flower varieties—sorts that are noted the country over.

## BEAUTIFY YOUR LAWN WITH A BED OF CANNAS—"The King of Bedders"

Nothing makes a finer appearance on a lawn than a bed of Cannas. It matters not how large it is or indeed how small; if you have a suitable spot that gets the sunshine, plant a bed of Cannas and enjoy the pure beauty of their freshly opened flowers every day, from June till frost. So great is the variety of sizes and colors that there seems no limit to the combinations and places in which these Cannas can be successfully used.

For example, the dwarfier kinds may be planted in single or double rows along the walk, or side of the porch; others may be banked against the side of a building or in front of a hedge or a background of shrubs (always placing the shortest kinds in front), or used as a hedge plant they prettily mark a dividing line where no real barrier is needed, but the best effect of all is produced when many plants of a kind are placed together in masses or large beds, round, square, oval or oblong, or a triangle bed of glowing color for some suitable corner.

### Directions for Laying Out Circular Beds

Always use tallest growing varieties in the center,

and then carefully grading each succeeding circle, using dwarf kinds for the outside. Plant one Canna in center of bed, next six Cannas fifteen inches apart in a circular row fifteen inches from center. For each succeeding circle use six more Cannas than were used in the previous circle, and make it fifteen inches farther away from the center. Measure your beds, and you can soon tell just how many plants you need.

Remember that our Cannas are started plants, not dormant roots, as are often sent out, and will come to you in good growing condition.

For a border to the Canna bed we would recommend red Salvia or Coleus (red or yellow). Salvias should be planted ten inches apart and the Coleus eight inches apart.

Price of Cannas for bedding—Fifteen for \$1.00, except those mentioned on this page, or 6 cents each if fifty or more are ordered at one time.

Price of Salvias for border—Twelve for 60 cents, twenty-five for \$1.00, or one hundred for \$3.50.

Price of Coleus for border—Twelve for 60 cents, twenty-five for \$1.00, or one hundred for \$3.00.

N. B.—Before mailing us your order read page 3, then refer to pages 71 to 77. We can send fruit and other stock in one shipment, thereby saving you express charges,

**Gorgeous Bedding Tuberos-Rooted Begonias**  
Have you tried our Superb Bedding Begonias?

If you have not, you should certainly plant at least a few this spring.

**THEY ARE GRAND**

The tuberous-rooted Begonia is the fashionable plant of the day, and richly does it deserve its honors. The very handsomest of our summer-blooming plants, flowering throughout the season, and as fine and varied in their color as the Geranium family. They are splendid bedders, delighting in a light soil of woods earth, very old cow manure and sharp sand. See that the bed is in partial shade and you will be delighted with the result. In the South, or where they cannot be planted in the shade of a house, a covering of burlap or canvas, some six or eight feet above them, merely to throw off the sun's rays, will allow them to come to absolute perfection, but they must have plenty of light and air. Do not allow them to become dry, and during hot weather they will take two waterings a day. When through flowering they can be dried off, shaken free of earth and wrapped in cotton until February or March, when they may be started again. Single, sep-

Fronds have a graceful effect produced flower lovers. They are finely cut and sometimesre as given flowering plants they do exceedingly well in the parlor and conservatory. The Ferns of the Pteris family do as well as the Sword Ferns; the best varieties for the house are to be found in the Pteris family. The Nephrolepis family, of which the well-known Boston is a member, has furnished us so many beautiful species of late years and are succeeding so well that this family is steadily growing in popularity. The varieties we list on this and the following page are all recommended for indoor growing in pots as specimens or for ferneries for table decoration. Ferns should be planted in a good light soil with some sand and leaf mold added; see to it that wherever planted they have good drainage. Their diversity and gracefulness of foliage make them much valued as plants for vases, baskets or rock work, or as specimen plants for parlor or conservatory. Keep them out of the direct sunlight and water carefully, that the delicate roots lying near the surface may never become dry.

# Our Choice Collection of Dahlias

## ALL VARIETIES, NEW AND RARE COLORINGS

The Dahlias are well known and much admired plants growing from tender tubers and adapted to bedding in summer. The flowers have a wide range of color, mostly scarlet, orange, yellow, crimson and various shades of other colors. The most suitable soil for the Dahlia is a rough, rich loam, to which has been added plenty of manure and some sand, and spaded into a good depth. Plenty of water is required to keep them in good shape and to produce good bloom, and during a very dry summer the watering must not be neglected. When the frost kills the stalks in the fall, take up the tubers and store in a dry place, covering with a dry earth to prevent them from starting.

Price for any one variety of Dahlias on this page, strong roots, 15 cents each; any two for 25 cents; \$1.35 per dozen.

This Peony combines cream, gold, white, pink, salmon, peach and apricot, the total color effect of the flower creamy-pink; strong, delicate fragrance; a splendid bloomer; extra fine. # CARNATIONS==The Divine Flower

For beauty of flower and color, ease of culture, certainty and freedom of bloom, together with exquisite fragrance, this is well called the "Divine Flower." Plants in the open ground quickly make large specimens, and when brought indoors in the fall, produce an abundance of flowers throughout the entire winter. Carnation blooms are expensive. Don't buy them—grow them yourself. Pinch the plants back frequently during the growing season.

We offer on this page twelve of the best Carnations. Price, 10c each, three for 25c; any seven for 50 cents.

Carnation Enchantress.

## WINSOR

This is a clear silvery-pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The stem is just right. The flowers are considerably larger than the Lawson and much better shaped.

## ENCHANTRESS

A very pleasing shade of light pink, deepening towards the center. When fully developed, over four inches in diameter; very attractive and fine form. Stem is strong and stiff; both out of doors and in the house the growth is ideal; very healthy and of vigorous constitution. Very early, free and continuous. Needs no special culture to develop its magnificent blooms.

## LADY BOUNTIFUL

A fine Carnation in size and form. We do not hesitate to recommend this variety as the best white yet introduced. The flowers are very large, borne on a stiff, strong stem; color a pure glistening white. One of the most fragrant Carnations we have.

## SUNBEAM

The first yellow that can be pitted against the well-known variety Buttercup in point of color and in all other points of that celebrated variety. Strong grower and free-flowering; long, strong stem; flowers three inches in diameter, and a deep golden-yellow with faint red stripes.

## WINONA

A grand new variety; color pure medium pink; form, size and growth of the best, while it is a continuous bloomer. A variety we can recommend.

## BOSTON MARKET

This new Carnation has attracted more attention than any other white Carnation yet introduced. It is a strong grower, with very large white flowers, highly perfumed.

## PROSPERITY

A variegated variety of a type unlike any of the striped sorts.

## WHITE DOROTHY

One of the best new white of recent introductions.

## ROSE-PINK ENCHANTRESS

A lovely rose-pink shade of color put on by the old favorite "Enchantress." The parent's practical, wide-awake habit of growth and trustworthy blooming qualities have always made it popular, and this new coloring but adds greatly to an already first-class reputation.

## MRS. CHAS. KNOPF

Somewhat darker than Enchantress during the winter months. The flower is four inches across, well built up in the center, and has a wide guard petal. Does not burst as much as Enchantress. The stem is twenty-four inches, holds the flower up gracefully at all times.

## VICTORY

Exceptionally satisfactory and useful as a cut flower, owing to its great stability, its nice long stems, and the prodigality of its bloom. Color, brilliant scarlet.

## THE BEACON

A splendid new red that blooms throughout a long season. Flowers are gracefully formed, and will average from two and three-quarters to three inches in diameter. Color scarlet, with a brightening dash of orange.

## WHITE PERFECTION

All that its name implies. Bloom is abundant, of large size and immaculate whiteness.

## GEORGIA

This variety is the largest white Carnation in cultivation—often measures four inches in diameter. The flowers are of the purest white, with petals of great substance, making it one of the very best.

### THE AMERICAN WONDER IS A TRUE EVER-BEARER

## HARDY GARDEN LILIES

### LILIUM PHILIPPENSIS

This rare and beautiful Lily is a native of one of the high mountain ranges of the Philippine Islands, and a few years ago a large lot was collected by an American and sent to relatives in Ohio. The bulbs thrived remarkably well, and last year we acquired the entire stock. Hence, we can offer superb home-grown bulbs at a low price. It is a great improvement on *Lilium Harrisii*, the flowers being much larger and a great deal longer, a gracefully tapering trumpet shape, snowy-white in color and of delicate fragrance. The plant is exceedingly graceful, the main stalk being slender and clothed with narrow, grass-like foliage. It is perfectly hardy anywhere in the open ground and a superb garden bulb. But for pots it is more than satisfactory, far excelling the best *Harrisii*. The bulbs after blooming remain dormant only a short time, when new growth and more flowers follow, often as many as three blooming periods a year. The cut represents this glorious Lily faithfully and gives a good idea of its wonderful beauty. Fine flowering bulbs. Price, 25 cents each.

# HARDY PERENNIAL PLANTS

Suitable for CEMETERY  
LAWN and GARDEN

Hardy perennials are those plants which die down in winter, but start again in the spring from the root, lasting many years and flowering every year. Never before have they been so popular, and from present indications of a desire for hardy plants, the demand for them will continue to increase, which will make them as popular in the United States as they have been in the horticultural centers of Europe for many years. Some are very useful for screens, some for hedges, rockeries, steep banks and terraces, others for bedding, edging and bordering and cemetery planting; then again others are fine for cutting to be used for table decorations.

Cultivation is of the simplest, beginning with any good garden soil for a foundation, which may be enriched with any good fertilizer, such as well decomposed manure or bone meal, deeply dug, well pulverized, in which the plants should be set as early in the season as possible, so as to enable them to become well rooted and established before hot, dry weather sets in, keeping the ground well stirred, and where it is not convenient to water the beds during hot, dry weather, a mulch of any loose material which will keep the soil from baking will be found beneficial.

## Strawberries

The blossoms of those marked with (P) are destitute of stamens, and are termed pistillate, and unless a row of a perfect flowering variety is planted at intervals not exceeding about a rod, they will produce imperfect fruit and but little of it.

Our land is especially suited to the development of strawberry plants, giving us extra fine crowns and roots, our plants weighing two or three times as much as many sent out. Our stocks are pure, each kind kept by itself and cultivated entirely for the production of plants. They are carefully graded, handled and packed, certain to give the best of satisfaction.

Dip the plants in water as soon as received, and bury the roots in moist, shady ground till you are ready to set them out; neglect for an hour or so is often fatal.

# Our Flower Seed Department

**W**E HAVE used the greatest care in obtaining our flower seed, and those we offer you are absolutely fresh, being grown under our personal supervision or imported from the best foreign seed growers. Failure in getting satisfactory results from seed planting may be attributed to the manner in which the seed is sown, rather than the lack of germinating power in seed, and seedsmen are unjustly censured when the fault lies in the cultivator and not in the seed. Most flower seeds germinate well in a fine, sandy loam, partly protected from the sun. Heat and moisture are the two essential points to start life in seeds. A general and fatal error is to start the seed too deep; small seeds should be barely covered with fine earth; large seeds by about half an inch. After sowing, the ground should be watered with a very fine sprinkler, regularly. Many seeds are killed by drought.

**SOWING OF SEEDS**—Spade the soil in the seed bed to a good depth, work it over and over with the spade in order to mash the small clods. Sow the seed in drills or broadcast, according to the

kinds, covering carefully and lightly, there being more danger in covering too much than not enough. Never allow the seed to remain in dry soil. For seeds that require an early start, to secure blooms before frost, sow in shallow wooden boxes—in good garden soil. Cover the seed very lightly, keeping the box in a sunny window, covering the box with a pane of glass until the seeds begin to sprout, but never allow the soil to become too dry.

**TRANSPLANTING OF SEEDLINGS**—Do not allow the little plants started in the boxes to grow too tall before transplanting. Care should be used in watering the seedlings well after planting and to protect from the sun a few days with light paper.

## ASTERS

The Aster is one of the most popular and satisfactory garden flowers now grown. The profusion of bloom makes it one of the best for bedding, and the lasting quality when cut makes it fine for house decoration. The newer varieties rival Chrysanthemums in color and form. The seed may be sown when trees are starting out in leaf out of doors or sown earlier in the house and transplanted.
